The Commonwealth Cyber Initiative CoVA CCI
Annual Update
Reporting Period: 3rd and 4th Quarters FY 2022

About COVA CCI

Virginia's Commonwealth Cyber Initiative (CCI) aims to create a Commonwealth-wide ecosystem of innovation excellence in cyber-physical systems (CPS) with an emphasis on trust and security. Certified as one of the four nodes of CCI, the Coastal Virginia Center for Cyber Innovation (COVA) seeks to:

- conduct fundamental research in cyber physical systems security (CPSS), artificial intelligence, and 5G contributing to the CCI mission of establishing Virginia as a global leader in secure CPS and in the digital economy,
- foster and accelerate commercialization of CPSS innovation in order to grow and diversify the Virginia cyber economy, and
- expand and diversify the cybersecurity talent pipeline through investments in research capabilities and commercialization efforts, and
- build a collaborative network within the region of educational institutions, business, and local, state, and federal agencies, and with the other CCI nodes

Under these overarching goals, COVA CCI is developing and launching diverse programs, ranging from cybersecurity research and commercialization to the creation of the Cyber Innovation Park.

COVA CCI created a network of faculty and researchers representing the region's community colleges and universities. These educational partners include Christopher Newport University, Norfolk State University, Old Dominion University, William & Mary, Regent University, ECPI University, Eastern Shore Community College, Paul D. Camp Community College. Tidewater Community College, and Virginia Peninsula Community. COVA CCI is also partnering with industry and government agencies including the CISCO, G2Ops, Huntington Ingalls Shipbuilding, KBRWyle, MITRE, MI Technical Solutions, Peregrine Technical Solutions, Sentara Healthcare, US Navy, and 360IT to name a few.

Table of Contents

Summary of Accomplishments for Q3/Q4 FY 2022 (January – June 2022) 4

1. External Research Grants Attracted to Support the Work of CCI 5

2. Research Grants and Programs Awarded 7

3. Results of Entrepreneurship and Workforce Programming 24

4. Collaborative Partnerships and Projects 27

6. Geographic Distribution of Funds Contained in HB30 29

7. Other initiatives. 29

8. COVA CCI Node in the News 35

Summary of Accomplishments for Q3/Q4 FY 2022 (January – June 2022)

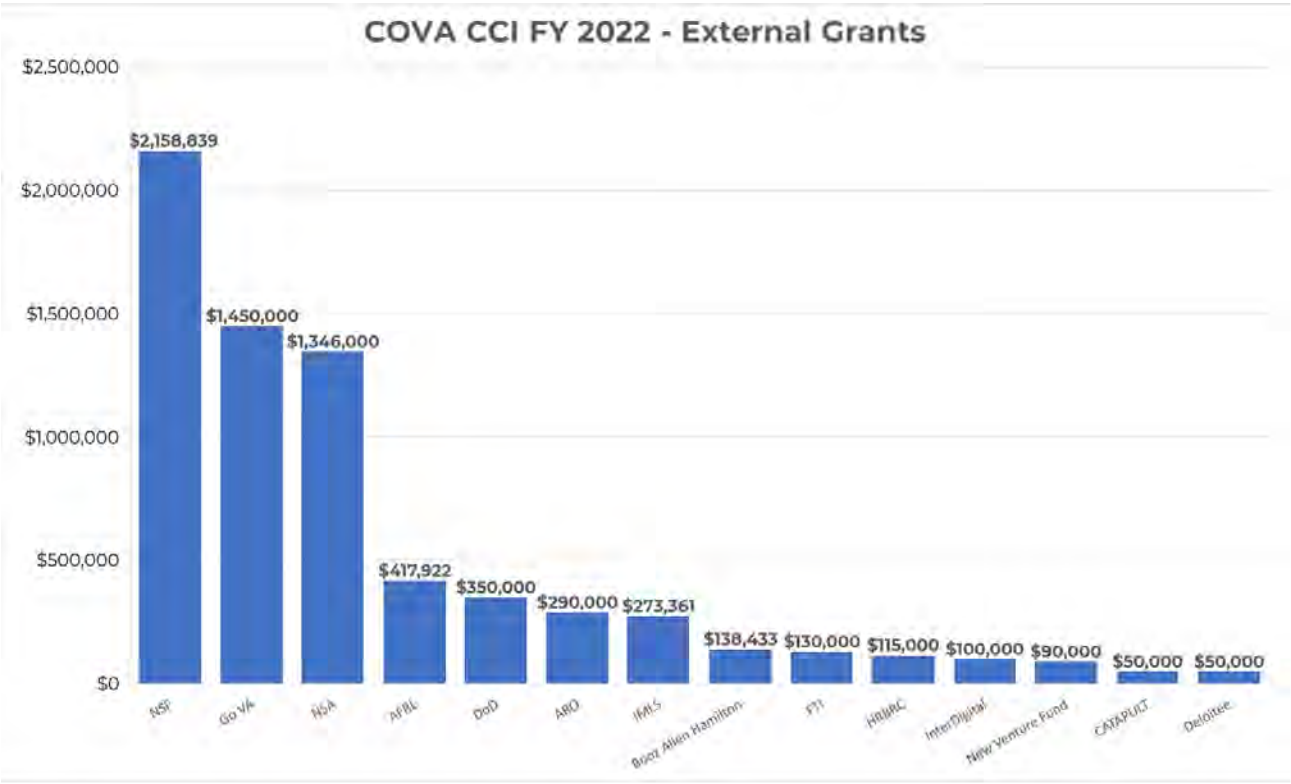
COVA CCI focus during the second half of FY 2022 (January – June 2022) was on continuing the funded cybersecurity research projects, initiating selected CCI Collaboration Research projects, and supporting sponsored activities.

1. During FY 2022, COVA CCI academic institutions were awarded approximately $6.96 million dollars in cybersecurity grants from government and private industry. With $2.28 in funding received during 3rd and 4th quarters of the year.
2. Awarded $880,000 in research funds as part of the COVA CCI FY 22 Cybersecurity and Innovation Research RFP with five projects selected to start on July 1, 2021, and two additional projects selected during the 4th quarter of FY 22.
3. Continued to support the over $2.1 million dollars from CCI sponsored programs/research awarded in FY 21/22.
4. Awarded $510,560 funds for lab upgrades at Camp Community College, Christopher Newport University, Norfolk State University, Old Dominion University, and William & Mary.
5. Hosted the first Coastal Virginia Cybersecurity Student Association (CVCSA) first Capture-the-Flag event, CyberForge in March 2022.
6. Selected sixteen (16) graduate students during fall 2021 to participate in the Cyber Experiential Learning (CyberExL) program. These students supported faculty led research projects, the non-profit Global Fund to End Modern Slavery, Camp Community College, and Peregrine Technical Solutions (local cybersecurity business).
7. Selected thirty (23) students to participate in the Cybersecurity Undergraduate Research Program – eleven (11) completed the program in Fall 2021 and twelve (12) complete the Spring 2022 program.
8. Selected fifty-four (54) students from fourteen universities and colleges to participate in the Spring 2022 cohort of Innovate Cyber Challenge.
9. Continued to work with the Virginia Space Grant Consortium on the Cybersecurity Internship program to place cybersecurity students from across the region into internship opportunities. To date twenty-eight (28) students from 6 universities/colleges have been placed with twelve (12) companies.
10. Developed a regional network of over 100 researchers, faculty, and business partners working for eight colleges/universities and 20+ businesses
11. Completed the installation of the Shared Collaborative Research Computing Environment (COVA SHARE) and currently are supporting projects under this environment.

Update on the Seven Requirements

1. External Research Grants Attracted to Support the Work of CCI

During FY 2022, researchers associated with COVA CCI received $6,959,555 in external grant funding from multiple public and private sources for 27 individual projects.



During the 3rd and 4th quarters of FY 2022 (January – July 2022) a total of $2,282,272 in external grants were received. With William & Mary awarded two projects for a total of $889,839 and Old Dominion University awarded nine projects for a total of $1,342,433. See the table below for information on these projects.

FY 2022 COVA CCI External Research Grants - January 2022-June 2022						
Project Name	PI/Co-PI	Lead Institution	Funding Amount	Funding Agency	Start End	
W&M Cybersecurity Awareness Initiative for Public Interest Technology University	C. Abraham	W&M	$90,000	New Venture Fund	1/1/2022	5/30/2023

Collaborative Research: CPS: Medium: Enabling Data-Driven Security and Safety Analyses for Cyber-Physical Systems	P. Nadkarni	W&M	$799,839	NSF	1/1/2022	12/31/2024
Navy Mission-Based 5G Architecture-Norfolk	M. Kuzlu	ODU	$138,433	Booz Allen Hamilton	2/1/2022	5/31/2022
Disinformation Detection and Analysis	S. Jayarathna, J. Wu	ODU	$324,000	NSF	3/1/2022	2/28/2025
Cybersecurity REsearch and Advanced Training of ROTC Students (CREATORS) Virtual Institute	H. Wu, C. Xin	ODU	$400,000	AFRL	3/11/2022	3/10/2024
Backdoor Detection, Mitigation, and Prevention in Deep Neural Networks	R. Ning	ODU	$175,000	NSF	5/1/2022	4/30/2024
Learning based Dynamic spectrum access for NextG networks	S. Shetty	ODU	$50,000	ARO	5/1/2022	9/30/2022
Intelligent Learning in Cyber Defense for JROTC Students and Teachers	D. Zhao, C. Xin, H. Wu, T. Dice	ODU	$175,000	NSA	6/27/2022	6/26/2024
Cyber Risk and Resilience Analytics	S. Shetty	ODU	$60,000	FTI	7/1/2022	9/30/2022
Algorithm Evaluation for Backdoor Detection and Mitigation in Remote Sensing Systems	K. Islam	ODU	$50,000	CATAPULT	7/1/2022	6/30/2022
IUCRC Planning Grant Old Dominion University: Center for Wireless Innovation towards Secure, Pervasive, Efficient and Resilient Next G Networks (WISPER)	H. Wu, C. Xin, S. Shetty	ODU	$20,000	NSF	8/1/2022	7/31/2023
Jan 2022 - June 2022			$2,282,272			

2. Research Grants and Programs Awarded from the Funds Contained in HB30

COVA CCI is providing funding under the research category for several initiatives.

Research Programs	Funding
FY 22 COVA CCI Cybersecurity Research and Innovation Funding Program	$880,000
Computer Lab Upgrades Program	$510,560
Cybersecurity Curriculum Development Program	$20,000
Cybersecurity Dissertation Fellowship Program	$100,000
Cybersecurity Undergraduate Research Program	$65,600
FY 22 CCI Funded Research Programs	$386,874
FY 21 CCI Funded Research Programs	$1,927,195
Research Scientists	$348,000

a) **FY 2022 COVA CCI Cybersecurity Research and Innovation Funding program**. COVA CCI is providing funding through the COVA CCI Cybersecurity Research and Innovation Funding program. This program supports diverse and inclusive CPSS research efforts, with a focus on the intersection of artificial intelligence (AI), cybersecurity, and CPS technologies applied to maritime, transportation, and defense sectors. Five projects were approved in June 2021 for a total of $750,000. These projects will be completed in December 2022. See the article "ODU-Led Cybersecurity Projects Grant Funded for more information."

Two additional projects were funded during the 4th quarter of FY 2022 for a total of $130,000. These projects are Cybersecurity & Barriers to Technology Adoption Among Maritime Activities and 5G-BEACON: Blockchain Enhanced Architecture and Coding for Orchestrated Networks.

COVA CCI Funded Research Projects – FY 2022

Project Title	PI	Co-PI	Amount
Toward Trustworthiness in Autonomous Vehicles	Evgenia Smirni (W&M)	H. Alemzadeh (UVA)	$150,000
A Real-Time Dependency Network Approach to Quantifying Risks and Ripple Effects from Cyberattacks in Shipbuilding and Repair Supply Networks	Rafael Diaz (ODU)	H. Shen (UVA)	$150,000

Comprehensive Assessment and Diagnostics for Federated AI Algorithms in Cyber Physical Systems	Rui Ning (ODU)	J. Le (ODU) C. Xin (ODU) X Deng (VT) Y. Hong (VT) L Freeman (VT)	$150,000 (ODU-$100000) (VT-$50000)
CIVIIC: Cybercrime in Virginia: Impacts on Industry and Citizens	Randy Gainey (ODU)	T. Vandecar-Burdin (ODU) J. Albanese (VCU) J. Hawdon (VT) K. Parti (VT) T. Dearden (VT)	$149,683 (ODU-$50723) (VT-$39267) (VCU-$59693)
Developing a Smart City Virtual Lab to Support CPS Experiential Learning	Murat Kuzlu (ODU)	S. Abdelwahed (VCU)	$150,000 (ODU-$75000) (VCU-$75000)
Cybersecurity & Barriers to Technology Adoption Among Maritime Activities	Mike Robinson (ODU)		$100,000 (ODU)
5G-BEACON: Blockchain Enhanced Architecture and Coding for Orchestrated Networks	Sachin Shetty (ODU)		$30,000 (ODU)

(1) Project Title: Towards Trustworthiness in Autonomous Vehicles. Dr. Evgenia Smirni, W&M

Abstract: Autonomous vehicles (AVs) are one of the most complex software-intensive Cyber-Physical Systems (CPS). In addition to the basic car machinery, they are equipped with driving assistance mechanisms that use smart sensors and machine learning (ML) for environment perception, pathfinding, and navigation. Even though tremendous progress has been made in advancing the safety and security of AVs, they are shown to be vulnerable to accidental and malicious faults that negatively affect their perception and control functionality and result in safety incidents. Recent works have highlighted two major challenges in safety validation and assurance of AVs: (i) With the increasing use of specialized hardware accelerators (GPUs) for running ML-based perception algorithms, AV control systems have become susceptible to transient faults (soft errors) that can result in erroneous ML inference and unsafe decision making and control. (ii) Safety assurance for AVs requires testing their resilience by identifying and simulating realistic safety-critical fault and attack scenarios by mining a tremendous fault space. To address these challenges, this project brings together a team of experts in GPU and CPS resilience from two CCI nodes to develop a holistic approach for end-to-end resilience assessment of AVs. We combine strategic fault injection at both hardware accelerator and controller software levels to assess the sensitivity of the ML components and control system to accidental or malicious faults and identify critical components and system states. The results from this project will make a firm step towards achieving trustworthiness in autonomous vehicles.

(2) Project Title: A Real-Time Dependency Network Approach to Quantifying Risks and Ripple Effects from Cyberattacks in Shipbuilding and Repair Supply Networks. Dr. Rafael Diaz, ODU.

Abstract: The evolution of defense shipbuilding supply networks toward digital environments increases operational complexity and requires reliable communication and coordination to regulate information exchange. As workers and suppliers transition to digital platforms, interconnection, information transparency, and decentralized decisions become prevalent. The appearance and extensive use of these digital platforms inexorably increase their exposure to cyberattacks. Unfortunately, the effects of a systematic cyberattack on one or more nodes belonging to the shipbuilding supply network (e.g., Colonial Pipeline) are unknown. This collectively may represent a substantial source of disruption. Cybersecurity protection of these networks requires a systemic approach to evaluate their vulnerability and understand ripple effects. However, current evaluation technologies and techniques are primarily applied to individual nodes or firms (if they are applied at all) and commonly lack systemic perspectives that consider overlapping risks and tiered hierarchies.

To overcome these limitations, we propose developing a cybersecurity supply network Artificial Intelligence (A.I.) framework that enables characterizing and monitoring shipbuilding supply networks and determining ripple effects from disruptions caused by cyberattacks. By representing and replicating the collective behavior of relevant shipbuilding supply network nodes, shipbuilders can monitor and measure the impact of cybersecurity disruptions and test the reconfiguration options that minimize the detrimental effects on the supply network. This framework extends a novel risk management framework developed by Diaz and Smith (2021) and Smith and Diaz (2021) that considers complex tiered networks and systemic hypervulnerabilities (COVA CCI - 2021ODU-06.005) and is currently tested in the port security cyber-physical setting.

(3) Project Title: Comprehensive Assessment and Diagnostics for Federated AI Algorithms in Cyber Physical Systems. Dr. Rui Ning, ODU.

Abstract: Federated Artificial Intelligence (AI) is becoming a critical part of cyber physical systems (CPS) in modern maritime, defense and transportation industry, with its game-changing capability for handling large volumes of data and making collaborative complex decisions in support of self-control and self-actuation systems. While the Federated AI is actively integrated into CPS applications, its malfunction can cause catastrophic failure or even be life-threatening for security-essential and safety-critical CPS such as in transportation and defense. Worse yet, as the Federated AI system incorporates AI and distributed devices, it inevitably introduces heterogeneity, randomness, contamination. Specifically, local

data of different participants can be noisy and imbalanced, resulting in performance degradation. Moreover, it is also vulnerable to data poisoning attacks. The overarching goals of this project include (1) establishing a design of experiments (DoE) framework to enable systematical investigation of the security and robustness of the Federated AI system; (2) investigating, assessing and unveiling characteristics of Federated AI models under different data imperfections; (3) developing effective schemes to comprehensively diagnose given Federated AI models for potential data imperfections; (4) developing experimental environment for secure and robust Federated AI research. The project will also develop training modules of secure and robust Federated AI, aiming to prepare students and practitioners with advanced skills to succeed in a cybersecurity career. Overall, the proposed work will lead to enabling technologies for secure and robust Federated AI systems, accelerating their development, and broadening their adoption in various application domains, especially the transportation, defense, and maritime sectors.

(4) Project Title: CIVIIC: Cybercrime in Virginia: Impacts on Industry and Citizens. Dr. Randy Gainey, ODU.

Abstract: Victimization from cybercrime is a major concern in Virginia, the US, and the world. It is estimated that in 2020, cybercrime resulted in Americans losing an estimated $4.2 billion (FBI 2021). Yet, precise measurement and understanding of the nature of the problem, methods, types, and targets is lacking. While the FBI maintains the Internet Crime Report (IC3), these data are limited to only those crimes reported by victims, which is only a small fraction of the cybercrimes that occur. While a few national citizen and business surveys have been conducted on specific types of cybercrime, the samples have been small, and there is reason to believe their findings may not represent the experience in the Commonwealth. Virginia presents a unique intersection of cyber physical systems with its large workforce in the maritime, defense, and transportation sectors, combined with an educated and mobile workforce making it a uniquely targeted area compared to many other states. This project will create, deploy, analyze, and report on a statewide cybercrime survey of both citizens and businesses. A study and analysis specifically focused on Virginia will enable the delineation of the highest priority threats, identify cybercrime methods used, and provide an assessment of geographic, demographic and industry variation in victimization across the state. The project will provide baseline knowledge and data for future policy, research, and interventions to reduce exposure to cyber victimization in the Commonwealth.

(5) Project Title: Developing a Smart City Virtual Lab to Support CPS Experiential Learning. Dr. Murat Kuzlu, ODU.

Abstract: In this project, our team will develop a virtual smart city lab environment, called VirtualLab@OpenCity, which engages researchers, students, and companies with smart city challenges, such as automation, data analysis, service reliability and sustainability. VirtualLab@OpenCity will provide an experimental environment using a standardized service that supports remote connectivity, data collection, visualization, analysis, resource management and control. VirtualLab@OpenCity aims to build Virginia's cyber-physical systems (CPS) workforce with hands-on experience on new technologies that ultimately lead to innovative smart city solutions. This project will contribute to positioning Virginia as a global leader in secure and trustworthy cyber-physical systems by (a) providing students, researchers, and developers a virtual ecosystem of advanced CPS technologies, (b) providing guidance and support to employ advanced technologies and innovative management systems for ongoing and future smart city plans and (c) foster fruitful collaboration between academia and industry to build a Commonwealth-wide smart city innovation workforce.

(6) Project Title: Cybersecurity & Barriers to Technology Adoption Among Maritime Activities. Dr. Mike Robinson, ODU

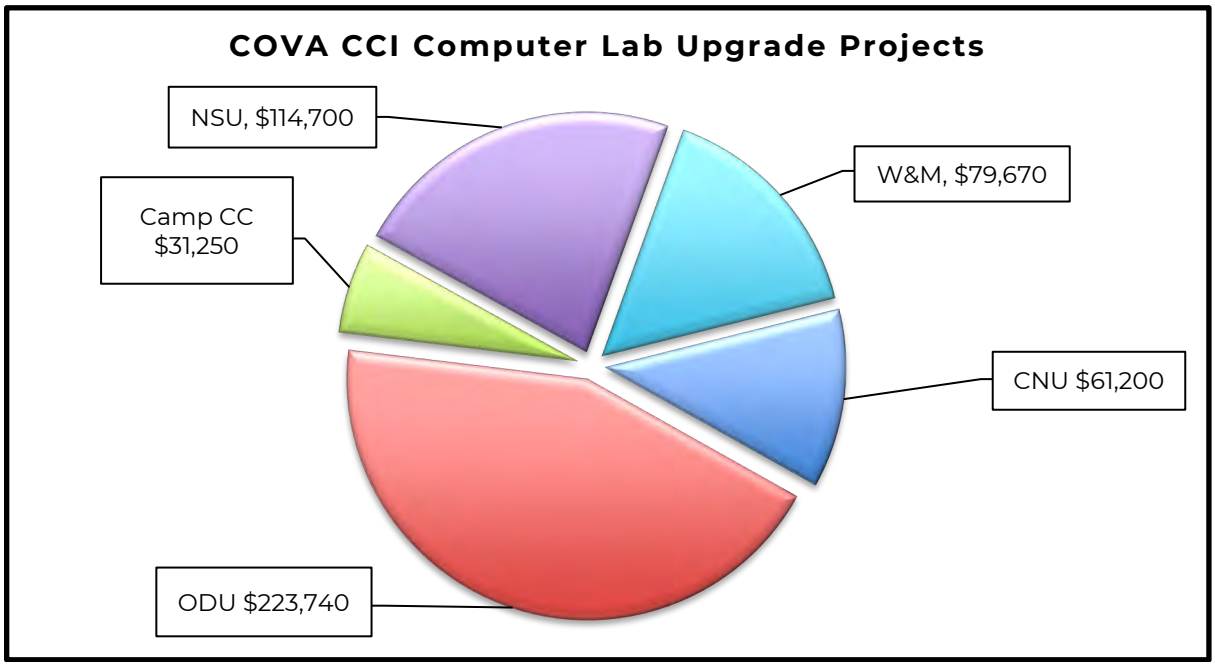
Abstract: To effectively mitigate maritime activities' concerns and challenges preventing them from taking advantage of potential benefits of new technology, a three-phased approach is proposed. The first phase will consist of an initial workshop to provide maritime activity executives with an overview of the project and request their continued participation. The second phase will consist of the bulk of the research, conducted through follow-on interviews with subject matter experts from participating activities, and will result in a comprehensive identification and prioritization of barriers. The third phase will provide an assessment of the state-of-practice solutions and recommendations on best practices, drawing on the findings of the second phase and related COVA CCI research. See this article for additional information regarding MIBE and their website - https://maritime757.org/.

(7) Project Title: 5G-BEACON: Blockchain Enhanced Architecture and Coding for Orchestrated Networks. Dr. Sachin Shetty, ODU.
This project is being funded by COVA CCI at the request of the Southwest CCI node and is part of their larger research project.

Abstract: 5G and beyond (NextG) systems will address the communication demands from numerous areas, such as entertainment, healthcare, manufacturing, agriculture, transportation, and public safety. In this proposal, we are particularly interested in their great potential to address the challenge of secure interoperability across networks for informed decisions. In the civilian domain, several applications can benefit from 5G for data-driven decision, including health monitoring systems,

autonomous vehicles, and disaster response. In the military domain, 5G will be a crucial enabler of the new warfighting concept known as Joint All-Domain Command and Control (JADC2). The integration of multiple parties, including various 5G broadband providers, government, and military users, will require enhancements to reliability and security of 5G and NextG networks. The multiple entities comprise human and machine agents interacting in a very complex environment. To provide a system of trust among all entities, it is desirable to enhance the 5G architecture with a distributed and decentralized ledger, so that the system does not rely on a single party to maintain the data and control the order of the data as it is transacted to the ledger.

b) **Computer Lab Upgrades.** COVA CCI funded six projects, totaling $510,560, supporting partner institution Computer Lab Upgrades with the intent of building new or providing upgrades to academic and/or research computer labs used by students and/or faculty to enhance their academic and research capabilities.



Project Title	Institution	Amount
Enhancing Secured Cybersecurity Infrastructure for Cybersecurity Students in an Interdisciplinary Department	Christopher Newport University	$61,200
Laboratory for Developing Highly Secure IoT-based Applications for Real-time Data Acquisition and Analysis	Old Dominion University	$75,000
GPU Powered IoT Testbed to Expand CCI Lab Environment	Old Dominion University	$148,740
The Cybersecurity Lab Enhancement Project	Camp Community College	$31,250

Enhancing CASE-V Testbed with a Ceph-Based Software-Defined Storage Infrastructure	Norfolk State University	$114,700
Developing Infrastructure for Advancing Research and Teaching in Security and Reliability	William & Mary	$79,670

c) **Cybersecurity Curriculum Development.** COVA CCI is funding Cybersecurity Curriculum Development projects that are focused on identifying gaps in existing curricula and the development of strategies to fill these gaps. Two projects were funded in FY 2022 for a total of $20,000. Information and links to previously completed curricula are found on the COVA CCI Talent Development/Curriculum Development website.

COVA CCI curriculum development projects		
Project Title	Institutions	Amount
Cyber Commissioning Training to meet CPS Building Requirements	Old Dominion University	$10,000
Web Science and Web Security	Old Dominion University	$10,000

(1) **Cyber Commissioning Training to meet CPS Building Requirements Project Abstract.** Historically, cyber-physical systems (CPS), otherwise known as industrial control systems (ICS) or supervisory control and data acquisition (SCADA) devices, all of which include electrical, HVAC and water systems, were not connected to the internet. More recently renamed as operational technology (OT) or the internet of things (IoT) devices, these systems tend to be more focused on availability and often did not have to abide by cybersecurity regulations. This changed in 2015 when the Department of Defense (DoD) adopted the Risk Management Framework (RMF) National Institute of Science and Technology (NIST) Special Publication (SP) 800-82 Rev. 2, Guide to Industrial Systems (ICS) Cyber Security, to conduct cybersecurity on these systems. Then in 2018, DFARS 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting, also required the use of NIST SP 800-171, plus in June 2019, it was announced that the new DoD methodology to conduct these 7012 activities is the Cybersecurity Maturity Model Certification (CMMC), which while tailored more for IT vice OT systems, will be enforced in 2020 / 2021 to include ICS/SCADA/OT and IoT systems, and will be more rigorous in enforcing the cybersecurity gap for CPS. Finally, there has been a recent push by the DoD, to lock down all new buildings from a cyber security aspect, so taken together, you see a huge focus in this area, yet there is little to no training being done. This proposal is to develop an unclassified course icw the Virginia Cyber Range to support these requirements.

(2) **Web Science and Web Security Project Abstract.** Old Dominion University's Web Science and Digital Libraries (WS-DL) Research Group is internationally recognized for both its research and curricula. WS-DL's

courses (offered in the computer science department) web science, data science, digital libraries, web archiving, information visualization, human-computer interaction, natural language processing, data mining, machine learning, information retrieval, and web programming. More recently, WS-DL's research and course offerings have moved toward the intersection of the web and security. In the process of developing and delivering our courses, it has become clear that we need to offer a 400/500 level course focused on *web client security*. We are unaware of any such course currently offered in the state of Virginia with a focus on web client security. Given the central role that the web plays in our daily commerce, education, and entertainment, we should be doing a better job producing BS and MS students with expertise in securing web applications. While web security is a significant portion of cybersecurity, it is often overlooked or taken for granted. And web security requires thorough knowledge of the web itself. In the context of this proposal, we will develop, enhance, and share a four-course sequence that focuses on web programming, web server development, web science, and most importantly, web security. These courses are currently in various stages of readiness for sharing but have all been taught successfully in the CS department of ODU in the recent past. This will be a preeminent four course advanced undergraduate/beginning graduate sequence in all matters of the web.

d) **COVA CCI Cybersecurity Dissertation Fellowship program** supported four cybersecurity Ph.D. students, three (3) from William & Mary and one (1) from Old Dominion University. These students are using the funds to further develop their Ph.D. dissertations and research.

Name	Institution	PhD program	Dissertation/Project Title
Woosub Jung	W&M	Computer Science	Using power side channel auditing and deep learning to secure Internet of Things (IoT) devices
Sunil Manandhar (Graduated Summer 2022)	W&M	Computer Science	Improving Privacy, Security, and Safety in Emerging Platforms
Amit Seal Ami	W&M	Computer Science	Practical and Secure Software Assurance in IoT
Miguel Toro-Jarrin (Graduated Summer 2022)	ODU	Engineering Management & System Engineering	Predictors of Secure Email use Behaviors in Organizations in the USA

Amit Ami, W&M

Miguel Toro-Jarrin, ODU
(Graduated Summer 22)

Woosub Jung, W&M

Sunil Manandhar, W&M
(Graduated Summer 22)

Amit Ami attending the CCI Symposium

CCI researchers Woosub Jung and Gang Zhou of William & Mary, and Yizhou Feng, Sabbir Ahmed Khan, Chunsheng Xin, and Danella Zhao of Old Dominion University, project titled, "DeepAuditor: Distributed Online Intrusion Detection System for IoT devices via Power Side-channel Auditing" was accepted to the International Conference on Information Processing in Sensor Networks (IPSN) on May 6th. Woosub Jung (W&M) said they could not have completed this paper without the support of COVA CCI/CCI.

Two of the Fellows graduated and were awarded their Doctorate Degrees in Summer 2022 – Dr. Sunil Manandhar, William & Mary, Computer Science and Dr. Miguel Toro-Jarrin, Old Dominion University, Engineering Management & System Engineering.

e) **Cybersecurity Undergraduate Research Program**. COVA CCI supported the Cybersecurity Undergraduate Research Program in Fall 2021 and Spring 2022 program. This program leverages the strength of research-extensive institutions to support active research participation by

ODU Cybersecurity Student on the value of this program.
"This program pushed me to do independent research and create a final research product, which is a great thing to list on the resume and provides the chance to learn one aspect of cybersecurity more in-depth. I found this Program to be a great complement to my coursework in cybersecurity at ODU, and I value the connections to other educational institutions (e.g., William & Mary) that the Program provided. My research project could very well end up factoring into my future career directions in cybersecurity and law."

undergraduate students in the area of cybersecurity. Students will have opportunities to explore a variety of cutting-edge research topics, including but not limited to: Blockchain Security, Cyber Law & Policies, Human Behavior Security, Online Scams, Mobile Protection, Secure Digital Printing, Secure Internet of Things, Secure Machine Learning, Social Engineering, and Wireless Security. To learn more about this fall's program see this article. The student research is found on the COVA CCI/Innovation/Undergraduate Research website.

COVA CCI Cybersecurity Undergraduate Research Program

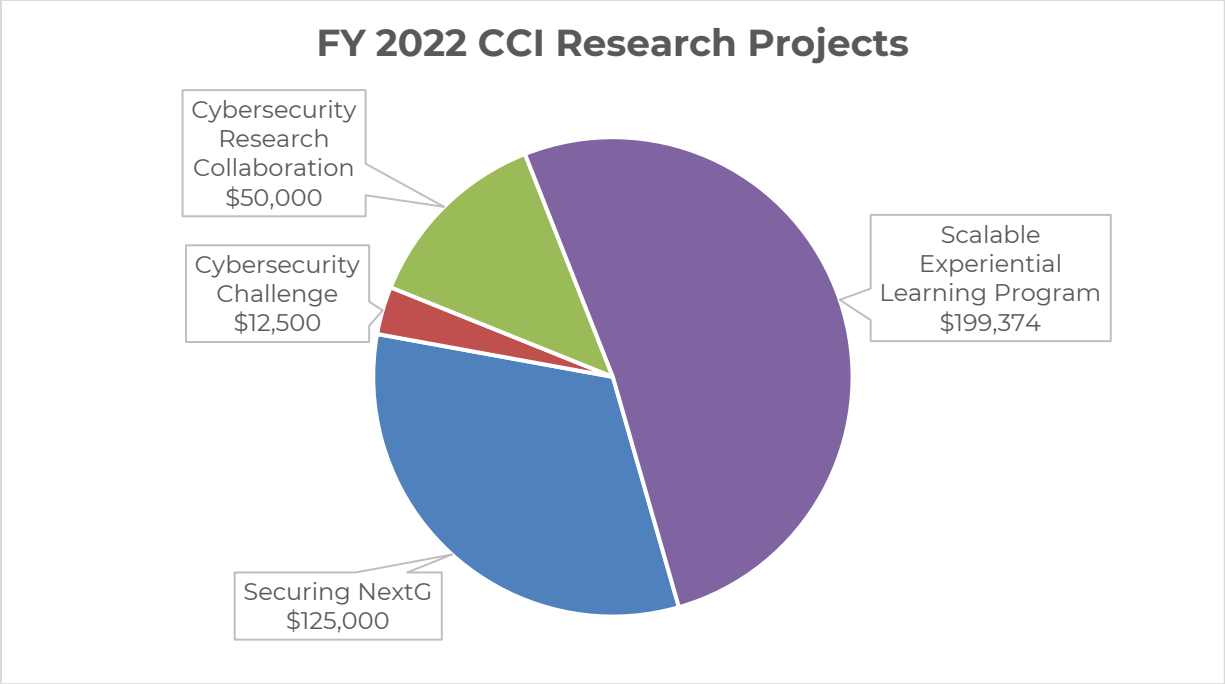
f. **FY 2022 CCI Funded Research Programs.** COVA CCI received multiple projects in the amount of $386,874, in response to various requests for proposal sponsored by CCI in FY 2022.



FY 2022 CCI Research Projects	Awards	Total Funding awarded to COVA CCI
Securing NextG	2	$125,000
Cybersecurity Challenge	1	$12,500
Cybersecurity Research Collaboration (FY 2022)	1	$50,000
Scalable Experiential Learning Programs (FY 2022)	2	$199,374
Totals	**6**	**$386,874**

(1) **Securing NextG.** COVA CCI received one award as lead PI and one as a Co-PI with Virginia Tech as the lead.

Title	PI / Univ	Co-PI / Univ	Funding
Blockchain-based Deep Learning Management to Enable Smart NextG Wireless Networks	Rui Ning (ODU)	Hongyi Wu (ODU) Hongzhi Guo (NSU)	$100,000
Radio Access Network Slicing Security for NextG Networks	Laura Freeman (VT)	Sachin Shetty (ODU)	$25,000 (ODU) $75,000 (VT)

(2) **Cybersecurity Challenge.** Camp Community College received one award as part of the Cybersecurity Challenge.

Title	PI / Univ	Co-PI / Univ	Funding
The Legacy and Sensitive Device IoT Passive Connection Project	Robert Tureman (Camp C.C.)	NA	$12,500

(1) **Cybersecurity Research Collaboration FY 2022.** Old Dominion University partners as a Co-Pi with Virginia Tech on the research project,

"Deep Resilience for Multifaceted Federated Learning in IoT."

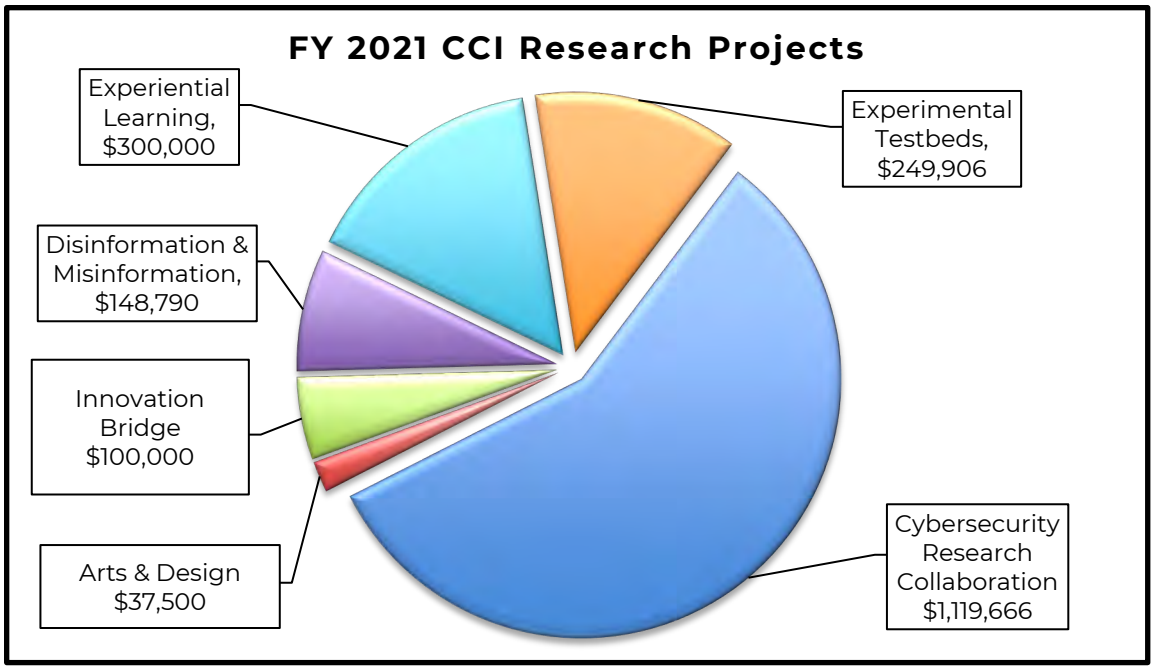
Title	PI / Univ	Co-PI / Univ	Funding
Deep Resilience for Multifaceted Federated Learning in IoT	Cho (VT)	Hongyi Wu (ODU)	$50,000 (ODU) $75,000 (VT)

(4) **Scalable Experiential Learning Programs FY 2022.** William & Mary and the Virginia Space Grant Consortium were awarded projects in support of this program.

Title	PI / Univ	Co-PI / Univ	Funding
Disinformation as Data Poisoning	Daniel Runfula/W&M	NA	$99,374
Expanded Scalable Pilot Program for Experiential Learning in CCI Through the Commonwealth STEM Industry Internship Program"	Mary Sandy/ODU/VSGC	NA	$100,000

g) **FY 2021 CCI Funded Research Programs.** COVA CCI was awarded multiple projects in the amount of $1,927,195, in response to requests for proposal sponsored by CCI in FY 2021. These projects continued their research during FY 2022. See the CCI website for details on these projects.

CCI Research Projects	**Awards**	**Total Funding awarded to COVA CCI**
Collaborative Research Funds (FY 21/22)	7	$1,119,666
Building Bridges: Arts and Design	2	$37,500
Experiential Learning	2	$300,000
Experiential Research in CCI Testbeds	3	$249,906
Role of Cybersecurity in the Spread of Disinformation and Misinformation	3	$147,790
Cybersecurity Innovation Bridge Funds	3	$71,333
Totals	**17**	**$1,927,195**



(2) **Cybersecurity Collaboration Research project**. In January 2021, COVA CCI awarded seven (7) projects totaling approximately $1.1 million dollars, as part of the CCI led Cybersecurity Collaboration Research project. These projects continued during FY 22 and are beginning to finalize their research with most expected to be complete by December 2022. See this article for more details - [cci-funds-22-cybersecurity-grants]. The funded projects are listed below.

COVA CCI led Cybersecurity Collaboration Research projects

Title	PI / Univ	Co-PI / Univ	Funding
Secure and Privacy Preserving 5G Network for Connected Vehicles	Sachin Shetty (ODU)	Tan Le (ODU) Jeff Reed (VT) Cong Shen (UVA) Duminda Wegesekera (GMU) Kai Zend (GMU)	$200,000 ODU – $57,523 VT – $35,976 UVA – $35,500 GMU – $71,001
Backdoor Detection and Mitigation in Deep Neural Networks	Hongyi Wu (ODU)	Chunsheng Xin (ODU) Jiang Li (ODU) Rui Ning (ODU) Jin-Hee Cho (VT) Leigh Armistead	$184,816 ODU – $136,532 VT – $48,284

		(Peregrine)	
DeepPOSE: Securing Transportation Systems from GPS Spoofing Attack	Chunsheng Xin (ODU)	Danella Zhao (ODU) Yanxiao Zhao (VCU) Kevin Kefauver (GCAPS)	$200,000 ODU – $101,175 VCU – $50,000 VT – 48,825
A Systematic Evaluation of Smart City Security and Privacy	Adwait Nadkarni (WM)	Yuan Tain (UVA)	$194,850 WM - $95,460 UVA – $99,390
Virginia State Investments in Port of Virginia: A simulation-based framework for identifying, assessing, and mitigating systemic cybersecurity at the operational technology layer.	Rafael Diaz (ODU)	H. Shen (UVA)	$200,000 ODU –$77,761 UVA –$122,239
Sensor Degradation Detection Algorithm for Automated Driving Systems,	Michelle Chaka (VT)	Chunsheng Xin (ODU)	ODU - $75,000
Developing an Open Architecture Testbed and Learning-based Management for Smart Cities (OpenCity)	Sherif Adbelwahed (VCU)	Murat Kuzlu (ODU)	ODU - $65,000

(3) **CCI Arts and Design Collaboration Project.** The Arts and Design Collaboration challenges the community of researchers to reimagine and depict the results of cybersecurity research (and in particular research that occurs in CCI) either for scientific purposes, or for creative arts practice purposes. In response to this RFP, COVA CCI was awarded two projects and they completed their efforts during the 1st and 2nd quarters of FY 2022.

Title	PI / Univ	Co-PI / Univ	Funding
Develop a Gamified Mobile Application for Cybersecurity Education and Assessment via a User Centered Design Process	Kevin Moberly (ODU)	Ryan Patton (VCU) Deri Draper (ODU) Jeff Pittges (Radford) Bobby Keener (CivilianCyber)	ODU - $25,000
Moving Choreography to a New Universe: an AI-Driven Privacy Automation Approach	Kate Sicchio (VCU)	Sachin Shetty (ODU) Yan Lu (ODU)	ODU - $12,500

(3) **CCI Experiential Learning Project.** COVA CCI received two projects in response to the 2021 CCI Experiential Learning CFP and they continued their efforts during FY 2022.

Title	PI / Univ	Co-PI / Univ	Funding
Cyber Risk Management and Analytics: An Interdisciplinary Approach in Experiential Learning	Chon Abraham (W&M)		$150,000
Cybersecurity Monitoring and Assurance Training Program for Safe and Secure Port Operations	Sachin Shetty (ODU)	Saltuk Karahan (ODU) Sarada Prasad (ODU) Jim Haug (Longwood) Darrell Carpenter, (Longwood) Jennifer Maeng (UVA) Thomas Polmateer (UVA) Lessie Oliver-Clark (VSU) Wei-Bang Chen (VSU) Wookjin Choi (VSU) Rich Ceci (VIT)	$150,000

(4) **CCI Experimental Research in CCI Testbeds.** COVA CCI received three projects in response to the 2021 CCI Experimental Research in CCI Testbeds CFP. These projects are ongoing and are expected to complete their work by December 2022.

Title	PI / Univ	Co-PI / Univ	Funding
Experimental Research: Investigating Robustness and Uncertainty of AI Algorithms in Cyber Physical Systems	Rui Ning (ODU)	Jiang Li (ODU) Xinwei Deng (VT) Laura Freeman (VT) Yili Hong (VT)	$49,906
Beamforming Optimization for 5G and Beyond	Chunsheng Xin (ODU)	Hongyi Wu (ODU)	$50,000
Building a THz Testbed to Expand CCI 5G Testbed for 6G Research	Hongyi Wu (ODU)	Chunsheng Xin (ODU)	$150,000

(5) **Role of Cybersecurity in Spread of Disinformation and Misinformation.** COVA CCI received two projects in response to this RFP as lead PIs and one as a Co-PI with George Mason. These projects are ongoing and are expected to complete their work by December 2022. See these two articles, CCI Researchers Meet to Discuss How Cybersecurity Can Combat Misinformation and Disinformation and Professors Study Cybersecurity's Role in Curbing the Spread of Disinformation to learn more about this program.

Title	PI / Univ	Co-PI / Univ	Funding
The Acceptance and Effectiveness of Explainable AI-Powered Credibility Labeler for Scientific Misinformation and Disinformation	Jian Wu (ODU)	Jerimiah Still (ODU) Jiang Li (ODU)	$63,790
Question Under Discussion Framework to Analyze Misinformation targeting Security Researchers	Sachin Shetty (ODU)	Teresa Kissel (ODU)	$65,000
Artificial Intelligence Based Analysis of Misinformation and	Kavak Hamdi (GMU)	Saltuk Karahan (ODU) Hongyi Wu (ODU)	$64,996 (ODU -

Disinformation Efforts from Mass Media and Social Media in Creating Anti-U.S. Perceptions		Kim Perez (TCC)	$20,000)

(6) **Cybersecurity Innovation Bridge Fund.** COVA CCI received two awards as lead PIs and one as a Co-PI with VCU. These projects are ongoing and completed their work in June 2022.

Title	PI / Univ	Co-PI / Univ	Funding
A Minimum Viable Product to Secure IoT Devices through Power Auditing and Privacy Preserved Convolutional Neural Networks	Gang Zhou (WM)	Chunsheng Xin (ODU) Danella Zhao (ODU)	$50,000 (ODU - $21,333)
A Platform for Improving AI Trust in 6G Networks	Murat Kuzlu (ODU)		$50,000
GINDAR - Generative Adversarial Networks (GAN)-based Internet-of-Medical-Things (IoMT) Network Detection and Response	Tamer Nadeem/VCU	Sachin Shetty (ODU)	$50,000 (ODU - $0)

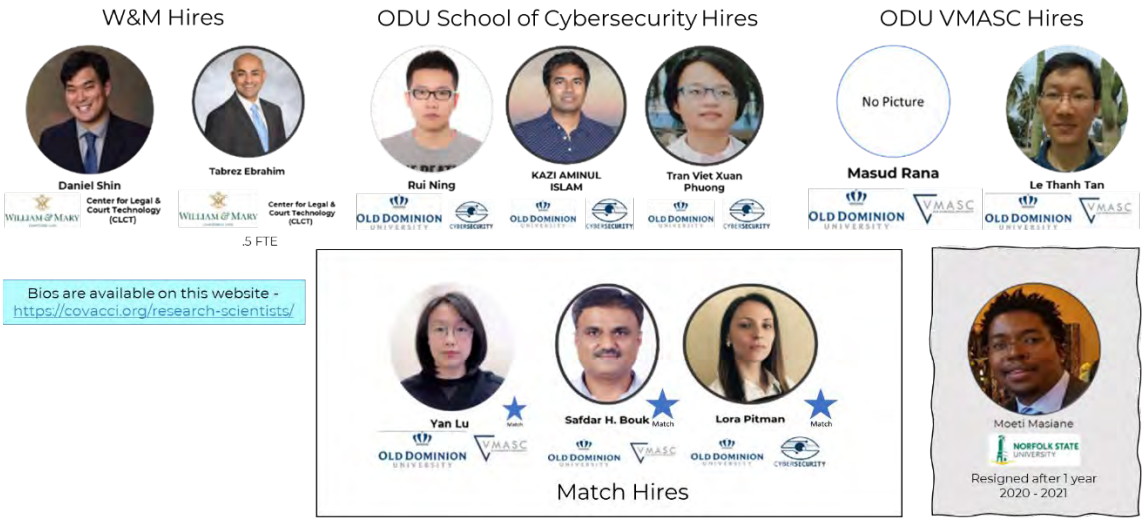
h. **Research Faculty Recruited.** COVA CCI hired six (6) additional research faculty in FY 2022, with four (4) supported directly with CCI funds and two (2) hired as matching department funds. Bios for these research scientists are found on the COVA CCI website/People/Research Scientists. You can also watch a short YouTube video, Meet the COVA CCI Research Scientists, where several of the research scientist provide an introduction.

- Tabrez Ebrahim (William & Mary).
- Kazi Aminul Islam, ODU School of Cybersecurity.
- Tran Phoung, ODU School of Cybersecurity.
- Masud Rana, ODU VMASC.
- ODU hired two additional scientists as a match – Lori Portman (ODU School of Cybersecurity) and Safdar Bouk (ODU VMASC).

COVA CCI also continued to support four research faculty hired in FY 2020/2021.

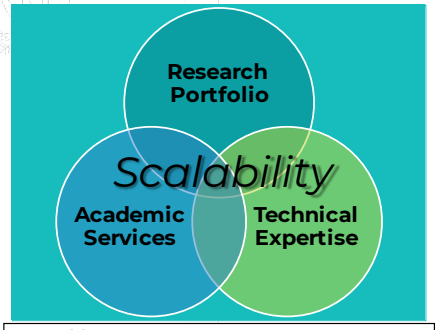
- Le Thanh Tan, Old Dominion University.
- Rui Ning, Old Dominion University.
- Daniel Shin, William & Mary.
- Yan Lu, Old Dominion University. Hired as a match.

COVA CCI Research Scientists



COVA CCI supports 6.5 FTE Research Scientists and 3 FTE as match.

CCI Funded Research Scientists ROE



Scalability: The research scientists allowed COVA CCI institutions (NSU, ODU, and W&M) to scale up their cybersecurity programs in terms of Research, Technical Expertise, and Academic Services.

Goals for FY 23. Continue their work in research, teaching and services leading to participation in large-scale interdisciplinary funding proposals.

- $3.1+ Million in external grants awarded as PI, Co-PI, or Senior Personnel
- Submitted over 40 papers and articles (with 28 published)
- VMASC Cybersecurity Lab elevated to a Center of Secure and Intelligence Critical Systems with 18 funded projects
- NSU's Research Scientist was instrumental in the design, installation, configuration, administration and operation of the new high performance computing system for the CASEV cybersecurity research testbed allowing NSU, ODU, CNU, and Jefferson Lab to conduct cybersecurity related research
- Significantly expanded the breath and depth of the cybersecurity expertise within both ODU's School of Cybersecurity and VMASC
  - ODU VMASC Research Scientists selected for summer faculty fellowships at the Air Force Research Labs and have developed strong connections with this organization.
  - Improved ODU's visibility in the National Spectrum Consortium and NextG Alliance
- W&M Research Scientist publishes a monthly Cybersecurity and information Security Newsletter with 14 issues released. Both W&M hires are a resource on all cybersecurity legal and policy related matters.
- Advise graduate students and Ph.D. candidates
- Supervise Graduate Research Assistants and teach graduate courses

48

3. Results of Entrepreneurship and Workforce Programming Innovation, Workforce Development and Experiential Learning Programs

COVA CCI is supporting several programs in innovation, workforce development, and student experiential learning. These include the INNOVATE Cyber Challenge, graduate student experiential learning program (CyberExL), AccessCyber and Cybersecurity Internship Program.

Program	Funding
Innovate Cyber Challenge	$90,000
CyberExL	$100,000
AccessCyber	$30,000
Cybersecurity Internship Program	$49,985 [1]

[1] Internships were funded in FY 2020/2021 and this reflects total payments from October 2020 through June 2022.

a) **Innovate Cyber Challenge.** COVA CCI expanded the scope of the Innovate Cyber Challenge to include students from all state public 2- and 4-year institutions with the goal of selecting 50 students. The summer and fall were spent on recruiting students for spring 2022 cohort with a total of 54 students from 14 universities/colleges selected to start the program in January 2022. They all completed their work in April 2022.

This program groups the students into teams and each team are assigned a cybersecurity problem/challenge. Over the course of the semester the teams will use design thinking to come up with unique solutions for this

problem and present their final product during a Showcase event in April 2022.

Visit the COVA CCI/Innovation/Innovate Cyber Challenge webpage to see previous projects.

b) **Graduate student experiential learning program (CyberExL).** COVA CCI moved the management of its graduate student experiential learning program to William & Mary where it is managed by Dr. Stephanie Blackmon, William & Mary School of Education. The program was rebranded as CyberExL and the first cohort of graduate students started working with their respective organizations in January 2022. A total of sixteen students were selected in fall 2021 to support several programs/research projects, including the Global Fund to End Modern Slavery, Peregrine Technical Solutions, COVA CCI AccessCyber, Camp Community College, COVA CCI Innovate Cyber Challenge, and two research projects, Cyber Risk Management and Analytics led by Dr. Chon Abraham, William & Mary, and Crowed sourced Review Manipulation Attacks Online platforms led by Dr. Faryaneh Poursardar, Old Dominion University. Additional information can be found on the COVA CCI/Talent Development/Experiential Learning Program website.

To learn more about the programs and students selected for the Spring 2022 cohort see this article – CCI's CyberExL Program is giving graduate students hands-on experience.

c) **AccessCyber.** COVA CCI provided $30,000 in funding to William & Mary to conduct an evaluation of COVA CCI experiential learning programs and curriculum materials. This program is called AccessCyber. The information will be complied into a database which can be used to amplify access to the curriculum and experiential learning opportunities across the COVA region, analyze access to the materials and opportunities to strategically address gaps in outreach, and impact the representative COVA communities by providing greater access to cybersecurity materials and opportunities. The ultimate goal is to develop a product that can be shared across all CCI regions.

d) **COVA CCI Cybersecurity Internship Program.** COVA CCI is partnering with the Virginia Space Grant Consortium (VSGC) to manage the COVA CCI Cybersecurity Internship Program using their Commonwealth STEM Industry Program (CSIIP). VSGC will leverage CSIIP to build and improve on the relationships with employers across the Commonwealth to develop internship and experiential learning opportunities.

To date twenty-eight (28) students from 6 universities/colleges have been placed with twelve (12) companies. See the COVA CCI/Talent Development/Cybersecurity Internships website for additional information and links to the CSIIP website.

4. Collaborative Partnerships and Projects

COVA CCI is working with academic institutions from across the state on Cybersecurity Research projects previously mentioned in this report. Researchers are also working with business partners on potential federal funding opportunities and current research. Some of these partners include CivilianCyber, MIBE, MITRE, MI Technical Solutions, Port of Virginia, and Peregrine Technical Solutions.

In addition, ODU received funding in June 2022 from NSF as a planning grant to explore the creation of an Industry-University Cooperative Research Center (IUCRC). The project is called WISPER: Center for Wireless Innovation towards Secure, Pervasive, Efficient and Resilient Next G Networks. This project is also being supported by the CCI Northern (GMU), CCI Central (VCU), and CCI Southwest (VT) and each of them received similar funding with the intent of creating a statewide IUCRC.

WISPER will coordinate academia, industry, and government to pioneer transformative next generation (NextG) wireless technologies for key industry verticals. Its missions include: (1) growing the U.S. innovation capacity in the next-generation wireless networks; (2) catalyzing breakthrough pre-competitive research for enabling NextG wireless communications; (3) contributing to the emerging North American vision for the next generation wireless networks; (4) providing guidance to standardization bodies and cooperation partners; and (5) producing a workforce prepared to tackle complex next-generation wireless challenges.

The proposed WISPER Center will contribute significantly to the country's future communication infrastructure, with broader impacts on diversity and inclusion, workforce development, and technology transfer. A Diversity & Inclusion Committee will be formed to review the current diversity and inclusion profile and develop specific measures and plans for inspiring the participation of underrepresented groups. WISPER will prepare students to become proficient in NextG techniques, leading to transformative changes in the state of wireless workforce preparedness. WISPER will enable seamless integration of the center's new discoveries into NextG wireless systems, accelerating technology transfer, enhancing the competence of the industrial members, and contributing to the Nation’s leadership in NextG technologies.

5. Correlated Economic Outcomes (Jobs and New Business Formation)

One the goals of CCI and COVA CCI is to grow the cybersecurity workforce in the Commonwealth. COVA CCI is working with university researchers to achieve this goal. Below are two examples how this is being accomplished.

Dr. Hongyi Wu, CCI Fellow and Director of Old Dominion University's School of Cybersecurity, is leading a project focused on growing Virginia's cybersecurity workforce by filling or creating over 1,300 jobs over the next five years. His project, "Cybersecurity Job Creation Systems," is being funded by the Growth and Opportunity Virginia (GoVA) in the amount of $1.45 million. Old Dominion University, working in partnership with George Mason University and the Eastern Shore Community College, along with over 40 additional partners, will recruit students, with an emphasis on veterans, to complete six specially designed courses which will enable them to earn slakeable credentials to fill the multiple cybersecurity positions across the state. It is projected that over 1,300 students will complete this program during the next five years, generating over $12.6 million in tax revenue. Additionally, industry and academic partners have committed $2.9 million in cash and in-kind support. This project shows the value of combining the efforts of industry and academia to fill a critical workforce gap. Additional information regarding this project is available in this article – ODU Cybersecurity Job Creation System wins Government Innovation Award.

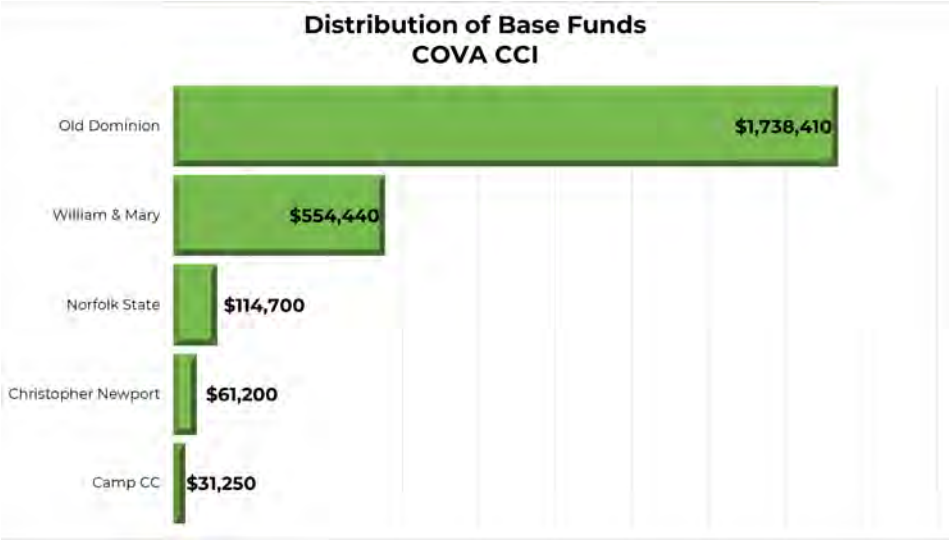
Another project highlighting the value of partnering with industry to expand the cyber workforce and cyber capabilities is the work supported by Dr. Sachin Shetty, CCI Fellow and Executive Director of the Center for Secure & Intelligent Critical Systems, Old Dominion University, in the development and the manning of the Port of Virginia's new Cybersecurity Operations Center. Dr. Shetty and his team from ODU, Longwood University, Virginia State University, and the University of Virginia, were awarded a CCI funded Experiential Learning project, "Cybersecurity Monitoring and Assurance Training Program for Safe and Secure Port Operations," to create a suite of experiential learning modules which the Port of Virginia will use to train cybersecurity interns, establishing a potential workforce pipeline. The first interns will start working with the Port in summer 2022. Additional information on this project is available in this article - ODU Helps to Guide Port of Virginia's New Cybersecurity Lab.

> Mr. Rich Ceci, Senior Vice President of Technology and Projects at the Virginia International Terminals, LLC said; *"Our recent work in the cybersecurity space has allowed us to leverage our relationship and involve very high-caliber academic expertise to meet an urgent need. Together we are building what will become a reference model for the entire U.S. port industry."* (ODU Helps to Guide Port of Virginia's New Cybersecurity Lab.)

6. Geographic Distribution of Funds Contained in HB30

Distribution of COVA CCI Allocated Funds across the node region.

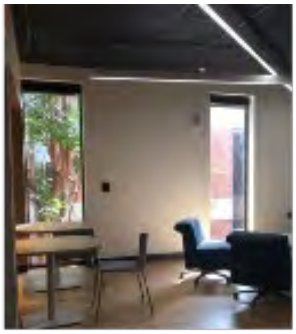
Distribution of Funds Across the Node Region	
Institution	Amount
Camp Community College	$31,250
Christopher Newport University	$61,200
Norfolk State University	$114,700
Old Dominion University *(Note 1)*	$1,738,410
William & Mary	$554,440
Total Committed Funds	**$2,500,000**
Note 1: Funding under ODU includes funds managed by the ODU Research Foundation, Virginia Space Grant Consortium (VSGC), Research Scientists Salary, and other Operations Costs	
Research Scientist Salaries	*$232,000*
Research Projects	*$729,906*
Computer Lab Upgrades	*$223,740*
COVA Share	*$18,180*
PhD Fellow Program	*$25,000*
Curriculum Development	*$20,000*
VSGC Managed Projects	*$20,000*
CoVA Cybersecurity Student Association	*$15,000*
UG Research (Includes payments to students from multiple institutions.)	*$65,600*
Innovate Cyber Challenge (Includes payments to students from multiple institutions.)	*$90,000*
Operations and other funds	*$298,984*
Total ODU Funds	*$1,738,410*

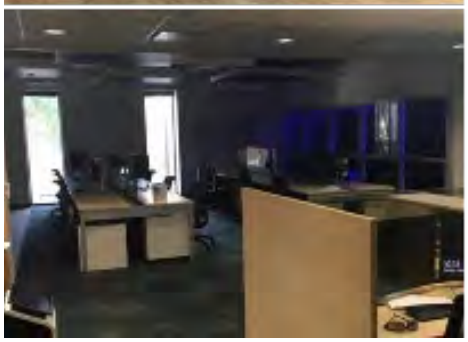


7. Other initiatives.

a) Cyber Innovation Park

Cyber Innovation Park opened in August 2021 as the new home to COVA CCI and ODU's School of Cybersecurity. It includes about 10,000 square foot space in Monarch Hall, for housing a data center, multiple research labs, teaching labs and classrooms, meeting space, faculty, offices, and a student cyber incubator. You can take a virtual tour of this space on the COVA CCI YouTube Channel.





b) COVA Shared Research Environment

COVA CCI invested $708,000 in FY 2020/2021 to create a shared collaborative research computing environment, known as COVA Share, to support the growing cybersecurity programs, academic and research collaboration opportunities, and industry partnerships. Guided by the researchers in the Coastal Virginia Center for Cyber Innovation, the computing center and network investment support the COVA Node and enable communication to the Hub and other Nodes. The environment lays a foundation to support 5G testbed data collection, secure, and transfer between connected Node members and to the CCI Hub for analysis and other collaboration. It provides access to a flexibly designed computing environment via connectivity improvements between ODU and William & Mary, and between ODU and Norfolk State University for potential collaborative efforts involving secure transfer of data between schools or secure remote access to physical or virtual hosts.

An example of a couple of projects in the on the COVA SHARE – Academic Environment are highlighted below.

Dr. Jian Wu, Old Dominion University, used the COVA SHARE Academic Environment for two courses. The CS734/834 (Introduction to Information Retrieval) was offered in Fall 2021. The major activities included web crawling, deploying web-based user interfaces, and mining data using machine learning and information retrieval methods. Each of the nine groups was given a virtual machine with 2 cores, 16GB RAM, 40GB storage, Ubuntu, and a GUI interface. In the Spring 2022 semester, Dr. Wu is teaching CS450/550 (Database Concepts) with more than 40 students. It is expected that there will be 14-20 groups. Each student is given access to a

database that is not visible to the others. Students in a group share a database for the group project. In general, this infrastructure provided local access to a collaborative space for group projects. The maintenance team provided timely and quality service. Dr. Wu would like to use the infrastructure for more future courses, such as CS418/518 (Web Programming) and his CCI research project on misinformation and disinformation. Dr. Wu also hopes GPUs will be added into the infrastructure to facilitate integrating deep learning into courses, such as CS734/834 and a future course on Fundamentals of Deep Learning.

Professor Robert Tureman, Camp Community College, is working with the COVA SHARE support team to enable his community colleges students to gain access to virtual Linux, Kali, and Windows systems. One challenge the students have is access to Linux or Windows based networks. This environment allows the students to use virtual machines and simulations to improve their cyber, networking and program skills in a structured lab. Professor Tureman received additional COVA CCI funds under the Computer Lab Upgrade program to assist in building a scaled version of the COVA SHARE environment on the Camp Community College campus. This lab will include workstations and networking to promote student learning through simulation of networking issues and programming problems which require implementing cybersecurity tools.

Visit the COVA CCI/Research/COVA SHARE website for additional information on COVA SHARE and watch a short overview YouTube video – What is COVA Share? – to learn more about this resource.

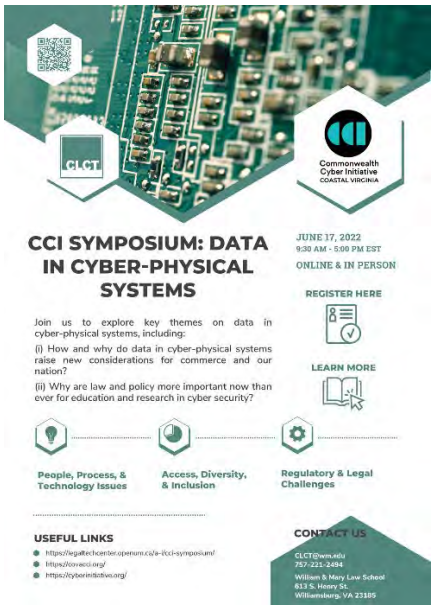
c) COVA CCI sponsored Symposiums/Conferences.

On June 17, 2022, COVA CCI working with William & Mary's Law School, Center for Legal & Court Technology, hosted a symposium focused on Data in Cyber-Physical Systems.

Cyber-physical systems are intelligent computing systems with intertwined physical and software capabilities and control by computer-based algorithms. The combination and coordination between computational and physical elements, instead of standalone elements, allows data to promote interactions and become ubiquitous in the digital economy. Join us, in this hybrid symposium, to explore key themes on data in cyber-physical systems, including:

(i) How and why do data in cyber-physical systems raise new considerations for commerce and our nation?

(ii) Why are law and policy more important now than ever for education and research in cybersecurity?



The symposium consisted of three panel discussions.

Panel 1: AI & Data for Security (Cybersecurity, Defense, and National Security).

Panel 2: Data Protection & Privacy in Commerce (Corporate, Law Firms, and Startups).

Panel 3: Cybersecurity Legal Education & Interdisciplinary Research.

To see the full agenda and read the biographies of the speakers visit the symposium website - https://legaltechcenter.net/a-i/cci-symposium/.

In addition, COVA CCI is planning a two-day Cybersecurity conference on September 28-29, 2022. COVA CCI Cybersecurity Education & Research Conference (CybER Con) builds synergies between the academy and industry through a focus on experiential learning research and practice in cybersecurity. To learn more about CybER Con visit the website - https://covacci.org/cybercon/

COVA CCI hosted other events during the year, and these include Undergraduate Research Showcases (Fall 21 and Spring 22), Innovate Cybersecurity Challenge Showcase and Pitch Event (April 2022), Coastal Virginia Cybersecurity Student Association Inaugural Capture the Flag competition – CyberForge (March 2022), and the CCI Cyber Showcase: Exploring Academic and Career Pathways (March 2022).
